

MICROSOFT ATTACK SIMULATION TRAINING POWERED BY SEPAGO

sepago. making people love it.

It's always Layer 8! – the main attack vector is the human in front of the device

Collaboration in times of digital transformation requires modern and secure working tools like Microsoft Teams and Microsoft Outlook. For IT departments, this means a shift towards completely new requirements in building a holistic secure modern workplace to enable business continuity.

However, the best security systems can fail, if the people in front of the device are not aware of the risks they face in our modern times and do not act accordingly.

Microsoft Attack Simulation Training

Microsoft was aware of this challenge and integrated the Attack Simulation Training into Microsoft Defender for Office Plan 2. This enables companies to train all their employees on how to be aware of modern attack methods. With the Microsoft Attack Simulation Training powered by sepago, we help organizations from implementation to interpretation. With our technical, process and change management know-how, we support you to prepare, carry out and interpret these Microsoft-supported simulations and trainings, to make your organization more secure.

The following benefits can be reached:

- Quick and effective simulation management
- Approachable and personal training experience
- Metrics that show the big picture
- Seamless integration into M365 Ecosystem

Agenda

Microsoft simulation training powered by sepago

- 1. Kick-off-Phase**
Tool demo
Process assessment
End-user Reward model
- 2. Monitoring & metrics set-up**
Measurement plan/ Scorecard
Dashboard implementation
API connection to Microsoft PowerBI
- 3. Process & Implementation guidance**
Development & documentation operational model/ process
Development & documentation technical Implementation plan
Development Phishing Awareness Communication plan & material
Roll-out Microsoft Attack Simulation & Training
- 4. Continuous support in Microsoft Attack Simulation & Training**
Initial campaign set-up
Continuous campaign set-up
Monitoring of results
Recommendations of improvements & next steps

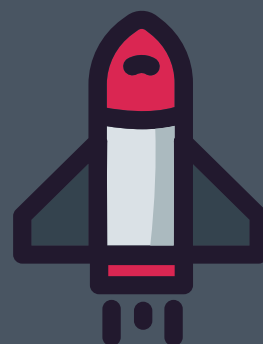

Microsoft Attack Simulation Training powered by sepago

sepago accompanies the pre-operation phase continuously and in a procedurally structured manner based on blueprints and templates to set-up the Microsoft Attack Simulation Training for efficient and effective cyber security phishing campaigns. In recent projects, sepago worked with visionary IT department heads, who felt it was important to ensure that the introduction of the Microsoft 365 Defender suite was not in vain. They wanted their users to recognize the danger of email and file-based attacks from the outside and prevent an attack via professional phishing and malware campaigns.

With the help of three clear steps, their employees can be made secure:

1. Structured campaigns with a security phishing awareness process.
2. The right training materials in the right context for the right people.
3. The interpretation of the campaign results and appropriate next steps.

Microsoft Attack Simulation Training powered by sepago can increase your employees' resilience against cyber-crime up to 45%!
