Modern Endpoint Management for a modern way of working

Even before the global pandemic of 2020/2021 the way we all work has been changing. Before, everybody was given one single corporate-owned device that was situated in the office perimeter, while we are now using multiple corporate-owned or maybe even BYOD devices from multiple places. IT departments are still built around the traditional IT lifecycle, managing images, controlling updates, locking down behavior and protecting users. When this traditional IT lifecycle meets today's market trends of evolving workplace, continuous updates from one to even four times a month and increasing endpoint threats, IT departments are faced with a challenge. How can they tackle distributed workers, endpoint diversity and sophisticated cyber security solutions while still maintaining employee satisfaction? How can they include new technologies like Windows 11 and Windows 365 into their existing landscape?

In reality, many Microsoft 365 customers already have a solution they are paying for, but not utilizing to the fullest – Microsoft Endpoint Manager. Microsoft Endpoint Manager combines the Microsoft Intune and Configuration Manager solutions to provide modern management of endpoints with the protection of a Zero Trust strategy.

We propose our sepago Endpoint Management – from PoC to Production. In a detailed session, we will introduce you to everything the Microsoft Endpoint Manager solution includes. Combined with a detailed customer assessment to get to know you and your challenges, this enables us to build a custom roadmap for you. Questions we ask during this process usually include:

- What are your current challenges and objectives?
- How we help you with this?
- What benefits does the Microsoft Endpoint Manager product family offer in your data centers, cloud, or hybrid environments?
- What could the ideal endpoint management solution look like for you?

Answers to those questions can be found in Microsoft Endpoint Manager. Leveraging this solution combined with sepago's experience, you will find out how to

- Improve your management capabilities with Microsoft Endpoint Manager
- Manage and protect your endpoints by enforcing policies and deploying security tools
- Secure your identities with multifactor authentication and conditional access from any device
- Enable your users to be productive with the applications they need, on the devices they want
- Leverage the powers of Autopilot to provide your users with company compliant devices – without the need to actually enter your premises

Agenda

1. Introduction Zero Trust Principles
2. What is Microsoft Endpoint Management and how is it different from Intune?
 - Configuration Manager
 - Intune
 - Autopilot
 - Endpoint Security
 - App Protection Policies
 - Endpoint Analytics
 - MDM & MAM for Android and iOS
3. How can I migrate to Microsoft Endpoint Manage-
4. How to use Configuration Policies
5. Compliance Checks vs GPOs
6. Monitoring with Microsoft Endpoint
7. Compliance & Conditional Access
8. Updates out of the cloud?! – your road to Windows 11

After we create the custom roadmap for you, we will move towards implementation. Here, it is important for us not only to look at technical challenges but also to take your organization along the way. New solutions can lead to new processes, which can bring a certain amount of resistance from your organization. Together, we will build up these new processes. To ensure the new processes are also part of your organization, we offer you extensive change and adoption management consisting of a variety of proven techniques to ensure your best fit for your organization.

Combining adoption and change management with joint process creation ensures that your Microsoft Endpoint Manager can bring the most value for you.

And if during the implementation we realize that your needs move towards a Managed Service for Endpoint Management, do not despair. Together we will find the best solution for you and your organization!

"It is important to support the change process continuously and procedurally structured. A holistic view with employees from all affected departments and hierarchy levels ensures a higher level of acceptance and understanding regarding the introduction of Microsoft security solutions."
